www.robocylinder.de

Cartesian RoboCylinder have never been more affordable.

The RoboCylinder equipped as standard with a Battery-less Absolute Encoder has been added to the "IK Series".
It helps reduce the design and assembly steps.
The RoboCylinder RCP6 Series has been adopted to achieve even higher speeds compared with conventional models.

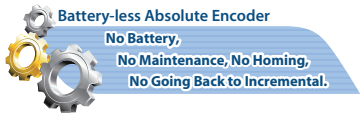
2 Equipped with high resolution Battery-less Absolute Encoder as standard.

Equipped as standard with Battery-less Absolute Encoder for all configuration axes.
No battery maintenance is required since there is no battery.
Homing operation is not required at startup or after emergency stop or malfunction.
This reduces your operation time, resulting in reduced production costs.

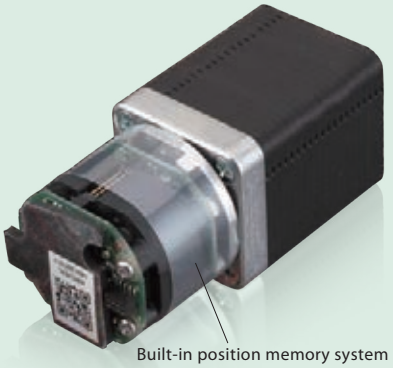


The advantages of using an absolute encoder.

(1) With an absolute encoder, home return is not required.
(2) No external home sensor is required since home return is not necessary.
(3) Removal of workpieces is not necessary, even after an emergency stop.
(4) The troublesome creation of home-return programs is not necessary even when stopping inside of a complex machine.

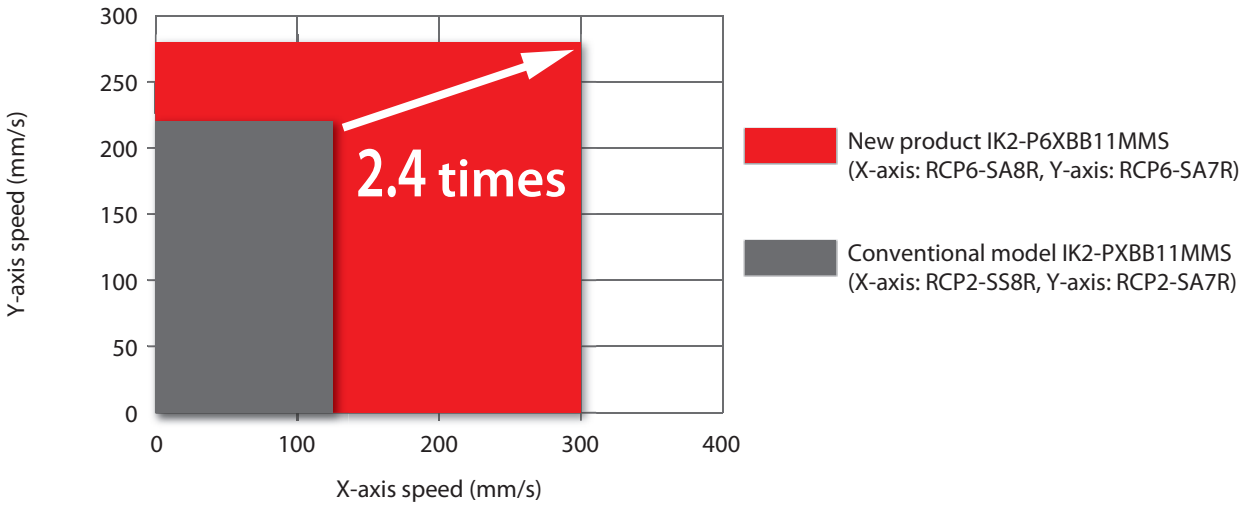
The advantages of battery-less.

(1) No battery maintenance required.
(2) No installation space for battery required.



3 Higher Speed

Compatible with PowerCon which is equipped with a high-output driver.
The maximum speed has been increased with the use of PowerCon.
This can reduce cycle time and help improve productivity.

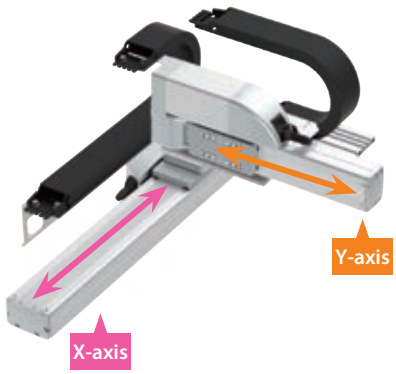


Configuration Type Descriptions

Each configuration pattern is available with an extensive range of sizes from light load to heavy load and short stroke to long stroke. Select the optimal model for your application.

XYB (Y-axis base mount) type

→ 2-axis combinations IK2-P6XB: p5~34



A basic configuration type in which the base of the Y-axis is fixed to the X-axis slider. It is operated by fixing equipment or a Z-axis on the Y-axis slider.

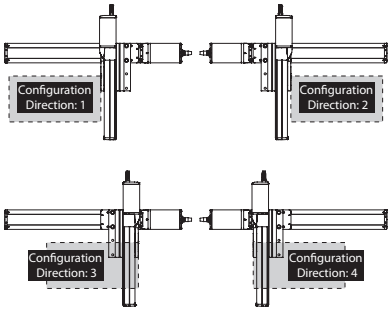
Point 1

Select from 4 patterns of Y-axis configuration directions. (See the figure at right)

Point 2

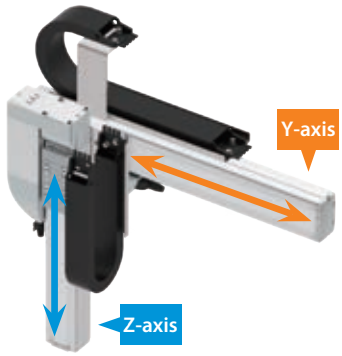
A cable track can be selected for Y-axis wiring. Select the cable track size from a maximum of 4 different sizes. You can also select a cable track for wiring by the user.

Configuration Direction



YZB (Z-axis base mount) type

→ 2-axis combinations IK2-P6YB: p35~70



For this type, the base of the Z-axis (vertical axis) is fixed to the Y-axis slider with the Y-axis side-mounted. The Z-axis slider moves vertically, allowing mounting of jigs or chucks for transport, raising, or lowering of workpieces.

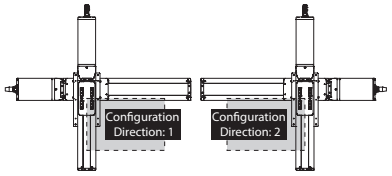
Point 1

Select from 2 patterns of Z-axis configuration directions. (See the figure at right)

Point 2

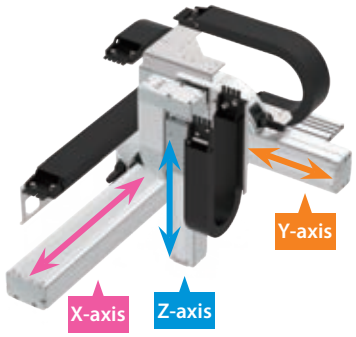
A cable track can be selected for Z-axis wiring. Select the cable track size from a maximum of 4 different sizes. You can also select a cable track for wiring by the user.

Configuration Direction



XYB (Y-axis base mount) + Z-axis base mount type

→ 3-axis combinations IK3-P6BB: p71~106



For this type, the base surface of the Z-axis is fixed to the Y-axis slider of XYB type (Y-axis base is fixed to X-axis slider).

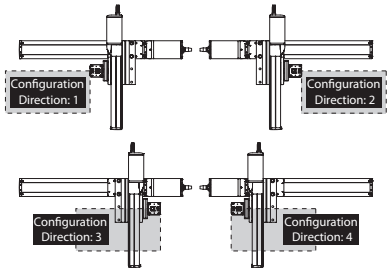
Point 1

The Z-axis body is fixed and the slider moves vertically.

Point 2

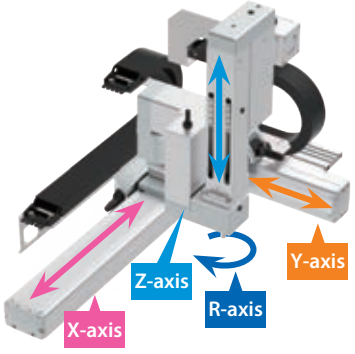
Cable tracks can be selected for Y-axis and Z-axis wiring. Select the cable track size from a maximum of 4 different sizes. You can also select a cable track for wiring by the user.

Configuration Direction



XYB (Y-axis base mount) + ZR (vertical/rotation) unit type

→ 4-axis combinations IK4-P6BB: p107~118



This is an XYB (Y-axis base mount) type Y-axis slider equipped with a ZR unit that enables both vertical and rotational operation.

Point 1

More compact with the integrated Z-axis and rotational axis.

Point 2

Cable tracks can be selected for Y-axis and Z-axis wiring. Select the cable track size from a maximum of 4 different sizes.

Cartesian RoboCylinder Options

Brake

Option Code B

Description This is a holding mechanism that prevents the slider from falling and damaging any attached fittings when the power or servo is turned off.
As the Z-axis is designed to be used vertically, a brake will be equipped as a standard feature.
For axes other than the Z-axis, please use the brake option as required.

Slider Cover (IK4 dedicated)

Option Code C0

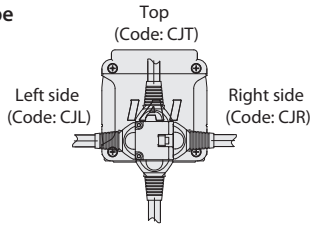
Description Equips the IK4 (rotational axis specification) with a slider cover for when the Z-axis slider is not in use.

Cable Exit Direction

Option Code CJT / CJR / CJL / CJB / CJO

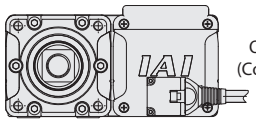
Description This option allows you to change the exit direction of the motor-encoder cable to top, bottom, left, or right.

Straight motor type



* When viewed from the actuator rear side (motor side).

Side-mounted motor type



* When viewed from the actuator front side.

Non-motor End Specification

Option Code **NM**

Description The normal home position is set by the slider and rod on the motor side, however there is the option for the home position to be on the other side to accommodate variations in equipment layout, etc. (Please note that changing the home position after the actuators are shipped may require the products to be sent back to IAI for re-setting.)

Slider Roller Specification

Option Code **SR**

Description The slider of the standard slider type specification is changed to the same roller structure as the cleanroom type. When using the slider roller spec., the appearance and dimensions of the slider cover will be the same as the cleanroom type.
Changing to roller specification will make the external view and dimensions of the slider cover the same as the cleanroom type.

MSEL

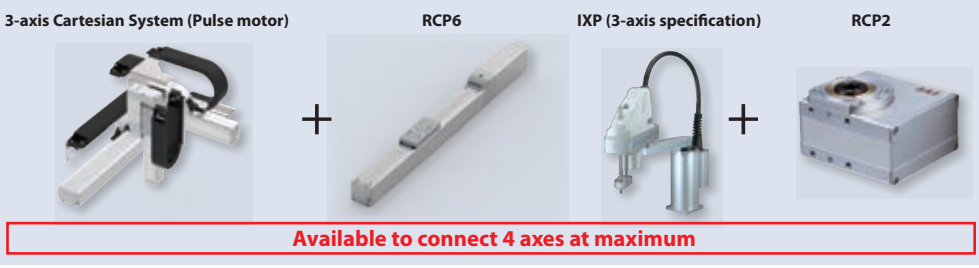
RCP6/RCP5/RCP4/RCP3/RCP2
Program Controller

Features

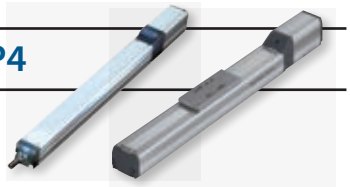
1 Control maximum of 4 axes available with pulse motor mounted RoboCylinder

It is also available for interpolation operation, widening the range of possible applications

Example of combinations



2 Available to connect RoboCylinders RCP6/RCP5/RCP4



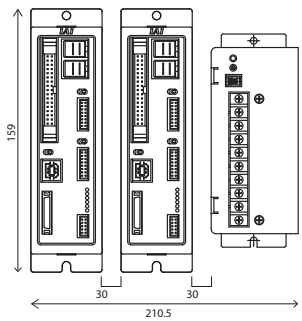
By applying PowerCon, it is now possible to perform interpolation operation with RoboCylinders RCP6/RCP5/RCP4, which are applicable for high-output driver, but were not feasible with the program controller PSEL in the past.

3 Reduced wiring/space saving

Until now, with 4 axes controlled for the actuator, 2 controllers (PSEL) for 2-axis control and a 24 V power supply were required.
Using MSEL with a built-in power supply, 4-axis control is possible with 1 controller. As a result, wiring is reduced and space is saved.

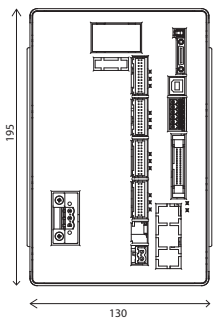
In 4-axis controlling of actuator

Conventional Product **PSEL 2 units + 24 V power supply)**



Cable Reduction
Applicable for 100 ~230VAC
with built-in power source

New product **MSEL 1 unit**



4 Equipped with expansion I/O slot

In addition to standard IO (IN 16 points / OUT 16 points), one slot is available as the expansion I/O slot. The expansion I/O is available to select from either a PIO (IN 16 points / OUT 16 points) or one of the various available communication boards.

PCON-CB/CFB

**Position Controller for RCP6/RCP5/
RCP4 (PowerCon Applicable) /RCP3/RCP2**

Features

1 High-resolution battery-less absolute encoder compatible

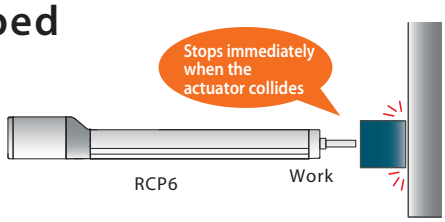
The RCP6 equipped with a high-resolution battery-less absolute encoder is supported. Since no battery is needed to retain position data, less space is required in the control panel, which in turn leads to lower cost of your equipment. The resolution is increased from 800 pulses/rev to 8192 pulses/rev.

2 PowerCon Equipped

PowerCon (high-output driver) which can enable the pulse motor to perform at its maximum capacity is now installed. By using PowerCon, the output of the pulse motor is increased by 50%. It contributes to cycle time reduction and productivity improvement.

3 Collision Detection Function Equipped

This function stops the operation immediately when the actuator comes into contact with an object.
The actuator stops without crashing, so that damage to the actuator can be minimized.



4 Enhanced Monitor Functions

The PC compatible software can display information about the actuator and controller in operation as waveforms.

*Information that can be displayed: Command current value, current speed/position, and PIO signals (start, positioning completion, alarm, etc.)

Using the trigger function, the end user can specify a particular moment, either a change in PIO signals or a designated moment during the actuator's operation time, to begin displaying the waveforms.

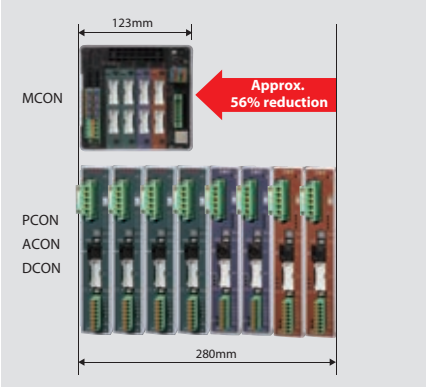
Features

MCON-C/CG, MCON-LC/LCG(*) Common (*) Coming soon

1 Saves space and reduces cost

It saves space in the control panel and significantly reduces the total cost by combining 8* controllers into one.

* For MCON-C/CG



2 Accommodates a wide range of actuators

It corresponds to actuators with battery-less absolute encoders, ultra-compact micro cylinders, multi-rotation rotaries and more, expanding the operable actuators from small to large.
In addition, it is equipped with the PowerCon (high-output driver), and achieves maximum speeds 1.5 times higher and maximum load capacities over 2 times higher than conventional models when used in combination with the RCP6/RCP5/RCP4 actuators.

Allows the installation of 7 types of driver boards

(1) Battery-less absolute/incremental driver boards for pulse motor
(2) Simple absolute driver board for pulse motor
(3) Battery-less absolute/incremental driver boards for PowerCon
(4) Simple absolute driver board for PowerCon
(5) Battery-less absolute/incremental driver boards for 24VAC servo motor
(6) Simple absolute driver boards for 24VAC servo motor
(7) Incremental driver boards for brush-less DC motor

* Some models are excluded.
Please refer to the catalog for details.

3 Many useful functions

Servo monitoring in AUTO mode function
· AUTO mode servo monitoring can now be performed using multi-axis controllers.
In addition, the monitoring can start from the moment that the condition of a selected signal changes. (Trigger function)

Calendar function
· With the addition of the clock function, the alarm history is displayed with the time of occurrence, making it easier for the alarm to be analyzed.

Smart tuning function
· The optimum acceleration and deceleration are set according to the payload to be carried.

Off-board tuning function (For 24VAC servo motor)
· The optimum gain is set according to the payload.

Vibration control function (For 24VAC servo motor)
· It reduces the shaking (vibration) of the workpiece attached to the slider.

Acceleration/deceleration mode specification
· The acceleration and deceleration patterns can be specified from the trapezoid pattern, first-order delay filter and S-shaped motion.

Axis name display function
· The axis name can be displayed in the PC compatible software and touch panel teaching box.

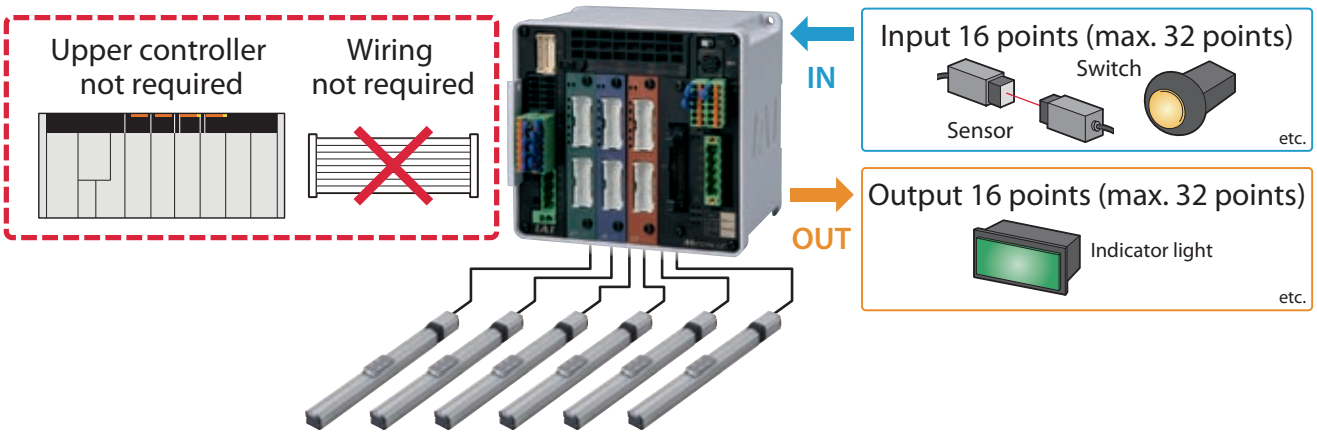
* Some functions cannot be used, depending on the network. Please refer to the instruction manual.

MCON-LC/LCG(*) (*) Coming soon

4 PLC function added

Capable of operating actuators by ladder programs and ON/OFF control of I/O (input and output) signals. Small-scale systems can be controlled by MCON-LC/LCG only. Load on the main PLC can be reduced by performing distributed control using MCON-LC/LCG for each procedure. In addition, it enables easier program simplification and troubleshooting.

* Please refer to the table below for more information about ladder programs.



LC-LADDER

● Features of ladder software

As MCON-LC/LCG can be controlled by ladder programs, those who are familiar with PLC can easily use it. In addition, "Dedicated Commands" for moving the actuator are available within the ladder program, making it even easier to control.

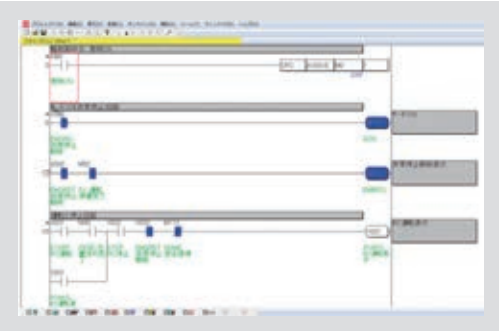
The editing software "LC-LADDER" can be used to easily write, monitor and debug ladder programs.

1 Program writing

Programs can be written using 27 types of basic command (contact command, output commands, etc.) and 53 types of application command (data comparison, arithmetic, logical, etc.).

3 Debug function

Run the program under the specified conditions to check the operation of the program.



2 Monitoring

The state when the program is run can be checked by respective functions.

4 Simulation

You can check the program on a PC (test run) without operating it on the controller.
